

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
1/26/26	1.25	Other	Attended Orientation zoom to learn about what the class entails, and how to give myself the biggest opportunity for success within it.		
1/28/26	2	Other	Familiarized myself with BrightSpace for this class specifically. Looked into time logs, read about how to work with Github and took the orientation quiz.	Look up definitions of unfamiliar words	
1/29/26	2	Research, Training, Learning	Researched what makes a good resume and how to keep it concise, yet informative.		
1/29/26	4	Other	Completely made a resume from scratch	Refine this throughout the year, adding even this project to it at the end of the semester	
1/30/26	2	Supervisor Discussion	My supervisor emailed me to tell me to get Android Studio, write some simple programs, and successfully upload at least one to my device.		
1/31/26	4	Research, Training, Learning	Researched more in detail about how Github works, and spent time playing around with some code in Android Studio.	Set up my Github properly, and get myself to a comfortable standing within it.	
2/3/26	1.5	Supervisor Discussion	Met in the Brooklyn College library with my supervisor to go over the beginning of my project, and show her the completed simple program that was asked of me.	Continue working on my app to build a homepage, with a layout that's readable.	
2/6/26	2	Documentation	Set up my GitHub for the project and committed my first change to the README.md file, and committed my initial project file.		
2/6/26	4	Coding	Added main layout of my app, with a title, input field, add button, and RecyclerView. Essentially a base page for my app.		
2/7/26	2	Design	Designed my app using "layout" field within Android Studio, to make it look cleaner.	Learn how to use this in a better way, to be more comfortable with layout design within an app.	
2/8/26	2	Coding	Updated my app to allow addition of items within my shopping list		
2/8/26	2	Testing & Debugging	Tested within Android Studio to check whether or not the code works as it's supposed to. Tweaked code accordingly.	Keep working on layout of the app, we want it to look nicer.	
2/8/26	0.5	Documentation	Committed my updated project to GitHub (addition of items within my shopping list)		
2/8/26	2	Documentation	Documented and filled out the "Project Proposal Survey"		
2/10/26	1.5	Supervisor Discussion	Met in the Brooklyn College library with my supervisor to go over how my project is coming along. Supervisor wanted to make sure that I am on the right track regarding what she asked for within our app.		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
2/13/26	1.5	Other	Attended a guest lecture hosted by professor Katherine Chuang, where a previous student of 4900 (Rigel Leonard) came to talk about how he navigated this class, what to expect, and how to stay on top of things. He also showed us his own project and what he did to keep his own timelogs in balance.		
2/15/26	3	Design	Learned how to use and Create diagrams for our 2/18 assignment using https://app.diagrams.net/		
2/16/26	4	Documentation	Created my powerpoint presentation for the 2/18 assignment with included diagrams and everything else required of me.		
2/16/26	2	Other	Used and looked over my powerpoint presentation to truly understand the steps that are necessary to build my project in an organized way.		
2/17/26	3	Coding	Started to work on my next "issue" as designated in Github for my project, which includes making an input field for my shopping list app for users to input whatever they need.	Continue to work on this portion, and commit these changes when they work properly.	
2/20/26	5	Coding	Committed my updated project to GitHub. Fixed 3 different issues, which include, fixing the broken layout within the homepage of my app. Created a back button to move from a list back to the main page. Created a function to allow users to delete items they add to their list.		
2/22/26	2	Testing & Debugging	Debugged the swipe function to delete items in my project. At first, the swipe function was broken and I couldn't tell whether or not it was a coding issue, or layout issue. It was both, as I had to add a border around an item so that users can tell when they've added something, instead of giving blank text. AND fixed the swipe function itself, so now when a user swipes to delete something, swipe works paired with a message to the user letting them know that the delete was successful.		
2/24/26	4	Coding	Improved the functionality, usability of the project. Added an undo option using Snackbar to prevent accidental deletions. Also added long-press deletion for entire lists with a confirmation dialog and undo capability.		
2/24/26	3	Testing & Debugging	Fixed input visibility problems related to Material styling, and addressing API warnings. Made sure there were correct adapter updates when adding and deleting items or lists. Also made sure Snackbar undo behavior restored data accurately, and ensured RecyclerView interactions remained responsive on the emulator.		
2/24/26	1	Documentation	Git commits were used to checkpoint stable states, and validated runtime through each change.		
2/27/26	3	Coding	Implemented persistence within my app so that lists will remember data even when app is closed.	Make sure to debug this, that way we can commit and push to GitHub	

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
2/27/26	2	Documentation	Put together, prepared, and presented my Live Demo to my supervisor (Professor Katherine Chuang).		
3/1/26	2	Documentation	Collected everything I needed for my First Demo Recording. I also practiced presenting in the video to make the topics concise to keep within the given time limit.		
3/2/26	2	Coding	Implemented full local data persistence using SharedPreferences with Gson serialization, enabling all lists and items (including checked state) to persist across app restart. Changed the data model from List<String> to a structured ShoppingItem object to support checklist functionality.		
3/2/26	1	Testing & Debugging	Resolved JSON deserialization crash caused by schema change (migrated from String-based items to object-based items). Found and fixed emulator SystemUI instability following Gradle/Studio update using cold boot and data wipe. Verified checklist toggle, reordering, persistence integrity, undo behavior, and swipe-to-delete functionality through repeated emulator testing and restart validation.		
3/2/26	2.5	Coding	Added toggle behavior allowing users to mark items complete, automatically reorder completed items to the bottom of the list, and visually apply strikethrough styling. Allow persistence updates into all item state changes and delete/undo actions. Made sure still compatible with existing swipe-to-delete and undo Snackbar functionality.	Implement header for completed items, smoother animation addition, allow use of item edit (within a list), add a list rename feature.	
3/4/26	2.5	Testing & Debugging	Allowed friends and family to user test my app for recommendations/error testing		
3/10/26	1.5	Supervisor Discussion	Met with my supervisor to go over how much project behaves in its current state. Also spoke about how recurring list implementation should be added since that was a feature my supervisor really wanted to see.		
3/12/26	4	Coding	Implemented a full archived lists workflow allowing users to hide lists from the main screen while keeping them accessible. Added ability to restore archived lists back to the main screen. Functionality Added--Long press archived list, Restore list option, Restored list immediately reappears in main list, Adapter refresh handled via onResume()		
3/13/26	4	Testing & Debugging	Archived lists can now be opened in read-only mode to view their contents. Debugged errors regarding the archive list section, where lists weren't archiving properly. They also wouldn't restore to the main page easily, went through LogCat and used ChatGPT to help me debug the program.		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
3/15/26	5	Coding	Added Snackbar undo behavior for deleting archived lists. Users can now also create a list by pressing Enter instead of tapping the Create button. Added visual divider separating completed checklist items. Implemented recurring list scheduling when archiving a list so that users can automatically make lists recur for any reason. Refactored recurrence system to support multiple recurrence types (i.e. day, month, year).		
3/15/26	1	Documentation	As I was working I was also documenting all my changes in GitHub to keep it up to date.		
3/17/26	5	Coding	A recurring list system was introduced to support repeated shopping and task workflows. When archiving a list, users are now prompted to choose whether the list should repeat on a weekly, monthly, or yearly basis. Based on the selected option, the user specifies a corresponding day or date, which is stored in the updated data model using recurringType and recurringValue. The system automatically restores archived lists when their scheduled time occurs, resetting all items for reuse while preventing duplicate restorations within the same day. This feature enables users to efficiently manage routine tasks such as weekly groceries or annual holiday shopping, significantly increasing the practical value of the application.		
3/18/26	3	Coding	To improve clarity and user awareness, recurrence information is now displayed directly on each list card in the main screen. Lists configured with a recurring schedule show a subtitle indicating their frequency, such as "Every Sunday" for weekly lists, "Every 1st of the month" for monthly lists, or a specific date for yearly recurrence. This enhancement ensures users can immediately understand why a list may reappear after being archived, eliminating confusion and improving transparency. By surfacing this information in the UI, the app aligns more closely with user expectations and standard patterns seen in modern task management applications, resulting in a more intuitive and professional experience.		
3/24/26	4	Testing & Debugging	Fixed bugs aligned with recurrence information regarding list cards. Archived lists were a bit buggy, where they weren't showing recurrence relationships.		
3/25/26	0.5	Documentation	reported the submission for the Project Interim Form and sent to my supervisor for her evaluation of my project so far.		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
3/25/26	3	Documentation	Prepared a full draft slide deck revision for the ListKeepr Android application Work-Study project presentation (Spring 2026), expanding from an initial 13-slide draft to an 21-slide full draft meeting all assignment requirements. Worked on the full draft for my slides to have ready for my supervisor.		
4/2/26	2	Coding	- implemented dark theme with muted violet and slate palette across all screens - Replaced default Material Design color scheme with custom dark palette - Defined semantic color tokens in colors.xml (background, surface, card, accent, text, divider) - Overrode both light and night themes to enforce consistent dark UI regardless of system setting - Applied dark background and surface colors to all activity layouts - Updated list cards and item cards with elevated dark surfaces and rounded corners - Styled FAB, toolbar, buttons, and input fields to match new palette - Updated checkbox tint to accent green and recurrence text to muted violet		
4/2/26	2	Coding	- added item preview to list cards on main screen - Changed card height from fixed 120dp to wrap_content with 120dp minimum - Added subtle divider separating title area from item preview section - Display up to 3 item previews per card with bullet or checkmark prefix - Checked items rendered at reduced opacity to distinguish from active items - Added overflow label showing remaining item count when list exceeds 3 items - All preview views default to gone so empty cards are unaffected		
4/3/26	3	Coding	separated recurrence and archive into independent actions, add drag handle reordering for list cards on main screen, implemented per-item reminders with notifications.		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/3/26	3	Testing & Debugging	resolved missing options in reminder dialog - Removed setMessage() from showReminderOptionsDialog() which was conflicting with setItems() and causing options to not render - Moved formatted reminder time into setTitle() so user still sees the scheduled time while Change and Cancel options display correctly resolved stale position index bug after drag reorder - Replaced visibleLists position index with shoppingLists.indexOf(list) in the card tap listener to ensure correct list always opens - Previous implementation used visibleLists position which fell out of sync with shoppingLists after drag reordering causing wrong list to open		
4/4/26	1	Coding	implemented favorite lists with star toggle and auto sort to top, and favorite lists now sort to top and drag constrained to section		
4/4/26	2	Documentation	Documented all my commits while working to GitHub while also updating the project board for issues I had been working on/ that are completed.		
4/4/26	2	Other	Practiced presenting my project for the 2nd Demo recording. Got all of my recent changes together and put together a concise video showcasing the progress on my project from the beginning to what it looks like now.		
4/9/26	2	Design	resolved long title truncation on list cards in grid layout Reduced title text size from 18sp to 15sp to give more horizontal room Reduced favorite star button from 32dp to 24dp Reduced drag handle from 24dp to 20dp Added android:maxLines=2 and android:ellipsize=end to title TextView Prevents long list names from breaking mid-word in two column grid layout		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
			implemented sectioned lists with inline item and section management Created ListSection.java data model with title and List of ShoppingItem Refactored ShoppingList.java to hold List of ListSection instead of flat items Kept getItems() as backward compatibility method returning all items across sections Added getSections() with null guard for migration of old saved data Added resetItems() iterating over all sections for recurring list reset Rewrote ItemAdapter.java with three view types: section header, item, section footer Added flat list builder that flattens sections and items into one RecyclerView list Checked items sort to bottom within their own section automatically Section header shows section title with rename on long press and delete button Section footer shows tap to add item row at bottom of each section Footer hidden in read only archived view via isReadOnly constructor parameter Added isSwipeable() to prevent swipe on header and footer rows Added SwipeDeleteResult for undo support on item swipe delete Removed fixed input bar and Add Item and Add Section buttons from detail screen Added FloatingActionButton for Add Section replacing the old button FAB hidden in archived view Items now added inline by tapping the section footer tap to add item row ListDetailActivity updated for section aware adapter and FAB logic Added data migration guard in MainActivity for old lists		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/12/26	3	Design	redesign list detail screen for cohesive flat layout Replaced individual MaterialCardView per item with flat LinearLayout rows Items within a section now share a unified card_dark background surface Added bottom divider between item rows for visual separation Added completed section divider in accent violet light above checked items Removed floating card appearance that made items look disconnected Increased section title font size from 13sp to 16sp bold for readability Section header background set to background_dark to visually separate sections Section footer background set to card_dark to match item rows Footer left padding increased to align with item text Item text size adjusted from 18sp to 16sp for better proportion with flat layout		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/14/26	3	Coding	replace checkbox with circular indicator and improve section header UI Replaced square CheckBox with circular ImageView for item checked state Added ic_circle_outline drawable for unchecked state in gray Added ic_circle_filled drawable for checked state in accent violet Tapping item row toggles circle between filled and outline states Updated ItemViewHolder from CheckBox to ImageView type Increased section title font size from 16sp to 20sp for clearer hierarchy Changed section title color from accent_violet_light to text_primary Tinted delete section trash icon to text_secondary so it is visible Removed intrusive green checkbox that dominated item row visual space		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/16/26	4	Testing & Debugging	improved reminder UI flow and fix notification permission Replaced automatic date then time picker chain with a custom dialog Users now see a Set Reminder dialog with a date row and time row Date row is required, time row is optional and defaults to 9 AM if not set Time row is disabled and muted until a date is chosen first Both rows update their label text after the user makes a selection Replaced int array state holders with local ReminderState helper class to avoid array index syntax corruption in chat rendered code Added runtime POST_NOTIFICATIONS permission request in MainActivity for Android 13 and above so notifications are actually granted Added ReminderReceiver log statement for alarm firing diagnostics		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/18/26	6	Design	revamped recurrence UI with single dialog and yearly date picker Replaced nested dialog chain with single unified recurrence dialog Added radio buttons showing all recurrence options at once Weekly option shows inline spinner to choose day of week Monthly option shows inline spinner to choose day of month Yearly option now shows a tap to choose date button opening a DatePickerDialog Users can now pick any date of the year for yearly recurrence Saving yearly recurrence without picking a date shows a helpful Snackbar Spinner pre-selects current value when dialog opens for existing recurrence Preview label shows current setting and updates live as user makes changes Added Holiday Special Date option as Coming Soon placeholder for future feature Replaced old automatic date then time chain with explicit user controlled flow Fixed duplicate shoppingLists.clear() and addAll() calls in loadData() Added runtime POST_NOTIFICATIONS permission request for Android 13 and above		
4/20/26	4	Testing & Debugging	updated item checkbox style and checked state visibility. Also Debugged code since app would crash sometimes. Finding this issue took a while. but was fixed through the use of Logcat within Android Studio, and Claude the AI service.		
4/21/26	1	Supervisor Discussion	Met with my supervisor to go over how much project behaves in its current state..		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/23/26	3	Design	set fixed card height for consistent grid layout - Replace wrap_content + minHeight with fixed 180dp height on list_card - Prevents taller cards (with preview items + recurrence) from stretching neighboring cards in the 2-column grid		
4/25/26	5	Coding	added item-level recurrence - Add recurringType, recurringValue, lastRestoredDate fields to ShoppingItem - Extend checkRecurringLists() to walk items and uncheck on recurrence day - Add try/catch for monthly Integer.parseInt() at list and item level - Long-press item now shows options menu: Edit, Set Recurrence, Remove - Add showItemRecurrenceDialog() and getItemRecurrenceDescription() to ItemAdapter		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/27/26	7.5	Testing & Debugging	resolved long-press conflict between item drag and options menu - Set isLongPressDragEnabled to false in ListDetailActivity - Add drag handle ImageView to list_item.xml - Add itemDragHandle to ItemViewHolder - Add setItemTouchHelper() to ItemAdapter - Wire drag handle touch listener in bindItem() - Hide drag handle in read-only/archived view - Mirrors existing drag handle pattern from ListAdapter/MainActivity fix: 'Other' section only appears when default section has pre-existing items - On first named section creation, remove empty default section entirely - If default section has items, retain it and render as 'Other' at bottom - Subsequent section additions unaffected - buildFlatList() and bindSectionHeader() display logic unchanged fix: restore default section when all named sections are deleted - After section delete, check if no default section remains - If missing, re-add blank default section so list remains usable - Undo correctly removes restored default before reinserting deleted section fix: show default section as 'Other' pinned to bottom when named sections exist - buildFlatList() renders named sections first, default section always last - bindSectionHeader() displays 'Other' label for default section in mixed lists - Default section title remains " in data model — display only, no mutation - Flat single-section lists completely unaffected		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/30/26	2	Coding	- added repeat icon indicator for items with recurrence set - Add ic_repeat.xml vector drawable - Add repeatButton ImageButton to list_item.xml (left of bell) - Add repeatButton to ItemViewHolder - Show/hide repeat icon in bindItem() based on item.hasRecurrence() - Tapping repeat icon opens showItemRecurrenceDialog() directly - Consistent with existing bell/reminder pattern		
5/1/26	2	Coding	- replaced 'recurrence' with 'repeat' in all user-facing strings - 'Set Recurrence' → 'Set Repeat' in list options menu - 'Set Recurrence' dialog title → 'Set Repeat' - 'Recurrence removed' snackbar → 'Repeat removed' - 'Recurrence: Every...' → 'Repeat: Every...' in item long-press menu - 'Recurrence for:' dialog title → 'Repeat for:'		
5/3/26	6	Coding	- wire up light/dark color resolution via values-night/colors.xml - Rename dark raw colors to avoid naming conflicts - values/colors.xml semantic colors now point to light mode values - Create values-night/colors.xml with dark mode semantic color overrides - No layout or Java changes needed — color names unchanged - Theme toggle now correctly switches between light and dark palettes		
5/4/26	1	Design	- dynamic theme toggle label shows target theme name - Add light_theme and dark_theme strings to strings.xml - onCreateOptionsMenu() sets toggle label based on current mode - Dark mode active → shows 'Light Theme' - Light mode active → shows 'Dark Theme'		
5/5/26	4	Research, Training, Learning	Allowed family members and friends to test my app having them give me suggestions and telling me what they like/dislike about it.		
5/6/26	3	Testing & Debugging	Went through my app and finalized how the app runs and works making sure I've reached the necessary goals for completion.		
5/7/26	3	Documentation	Practiced and recorded my final video submission for the CISC 4900 class.		
5/9/26	7	Design	Updated and redesigned my slide deck for the CISC 4900 class. Completed with 31 slides, and all the challenges/designs/etc. that went into completing this project throughout the semester.		

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
5/10/26	5	Documentation	Added everything from the last time I worked on my project board in Github. I added every single change I made from the last, and made sure to mark everything that was completed within the app.
